protein - protein database search, using Smith-Waterman algorithm MPsrch_pp

Thu May 20 12:21:39 1999; MasPar time 21.11 Seconds 653.617 Million cell updates/sec Run on:

Tabular output not generated.

Title:

>US-09-099-053-2 (1-488) from US09099053.pep (1 of 6) 3671 1 MEPFLRRLAFLSFFWDKIW......ERPSFATLREKLHAIHRCHP 488 Description: Perfect Score: Sequence:

PAM 150 Gap 11 Scoring table:

77977 segs, 28268293 residues Searched:

Post-processing: Minimum Match 0% Listing first 45 summaries

swiss-prot37 1:swissprot Database:

Mean 50.552; Variance 83.305; scale 0.607 Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

BIOCHEMISTRY 37:14683-14691(1998).

-!- FUNCTION: MAY SERVE AS PART OF A SIGNALING PATHWAY COUPLING THE FC RECEPTOR TO THE ACTIVATION OF THE RESPIRATORY BURST. MAY ALSO CONTRIBUTE TO NEUTROPHIL MIGRATION AND MAY REGULATE THE DEGRANULATION PROCESS OF NEUTROPHILS.

-!- CATALYTIC ACTIVITY: ATP + A PROTEIN TYROSINE = ADP + PROTEIN TYROSINE PHOSPHATE.

-!- SUBCELLOLAR LOCATION: D60-HCK AND P59-HCK ARE ASSOCIATED WITH MEMBRANES. P60-HCK IS ALSO CYTOPLASMIC (BY SIMILARITY).

-!- TISSUE SPECIFICITY: EXPRESSED PREDOMINANTY IN CELLS OF THE

INT. J. CANCER 54:571-577(1993)
-!- CATALYTIC ACTIVITY: ATP + A PROTEIN TYROSINE - ADP + PROTEIN TYROSINE PHOSPHATE.
-!- SUBCELLUIAR LOCATION: CYTOPLASMIC (PROBABLE).
-!- TISSUE SPECIFICITY: RESTRICTED TO CELLS LINES DERIVED FOR LYMPHOLD, BRAIN, BREAST, COLON AND BLADDER ORIGIN.
-!- SIMILARITY: TO OTHER PROTEIN-TYROSINE KINASES IN THE CADMAIN. BELONGS TO THE SRC SUBFAMILY.
-!- SIMILARITY: CONTAINS 1 SH2 DOMAIN.
-!- SIMILARITY: CONTAINS 1 SH3 DOMAIN.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     PARTIAL SEQUENCE FROM N.A.

The two Xenopus laevis SRC genes are co-expressed and each produce functional pefoster.

"The two Xenopus laevis SRC genes are co-expressed and each produce functional pefoster."

"I BIOL. CHEM. 264:10649-10653(1989).

-! CATALYTIC ACTIVITY: ATP + A PROTEIN TYROSINE = ADP + PROTEIN TYROSINE PHOSPHATE.

-! STALLARITY: CONTAINS 1 SH2 DOMAIN.

-! SIMILARITY: CONTAINS 1 SH3 DOMAIN.

-! SIMILARITY: TO OTHER PROTEIN-TYROSINE KINASES IN THE CATALYTIC DOMAIN. BELONGS TO THE SRC SUBFAMILY.

Nucleotide sequence of a cDNA coding for rat hck tyrosine kinase and characterization of its gene product.";

J. BIOSCI. 19:117-129(1994)

-!- FUNDTION: MAY SERVE AS PART OF A SICNALING PATHWAY COUPLING THE FC CONTRIBUTE TO THE ACTIVITION OF THE RESPIRATORY BURST. MAY ALSO CONTRIBUTE TO NEUTROPHIL MIGRATION AND MAY REGULATE THE DECANIZATION PROCESS OF NEUTROPHILS.

-!- CATALYTIC ACTIVITY: ATP + A PROTEIN TYROSINE - ADP + PROTEIN TYROSINE PHOSPHARE.

-!- SUBCELLULAR LOCATION: ASSOCIATED WITH MEMBRANES.

Statistics:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

proteins can be used as probes to identify and clone related sequences; to detect protein-encoded RNA; to generate transgenic animals and in gene therapy (optionally after mutation). Ab are used to determine the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   peptide(s) derived from type II fimbrial protein of Porphyromonas gingivalis used in the diagnosis and treatment of periodontosis Example 1; Page 16-21; 22pp; Japanese. R92128 is the 72 kb subunit protein of Porphyromonas gingivalis which contains the type II fimbrial protein. Peptides derived from the type II fimbrial protein. Peptides derived from the priodontosis. The peptides may also be used in a vaccine for immunisation against the disease.
                                                                                                                                                                       Gaps

This sequence represents a Herpes simplex virus type-2 (HSV-2) protein sequence of the invention. This sequence was isolated from a HSV-2 strain sequence of the invention. This sequence was isolated from a HSV-2 strain SBS (deposited as ATCC VR-2546) DNA fragment designated Contig ID 101.

Based on homology, this sequence is a (X02138) 34K (Us10) protein.

The proteins can be used for the treatment tor prevention of disease, to induce an immunological response in a mammal or to identify inhibitors, activators or novel antivirals. Antagonists of the proteins can be used to inhibit a viral polypeptide. The DNA sequence or a vector containing it can also be used to induce an immunological response in a mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence represents the cell surface polypeptide of P. gingivalis. The DNA encoding this sequence was isolated on a 3.4 kb Kpil/Xhor P. gingivalis fragment which was combined with pBluescript to give pCSP409. This plasmid was used to transform E. coli, which upon culture produced the cell surface protein. The expressed protein can be used in the diagnosis and prevention of periodontal disease, e.g. by

07-DBC-1998 (first entry)
HSV-2 strain SB5 Coniig ID 101 ORF#1 protein.
HSV-2 strain SB5; immunological response induction; therapy;
antivital identification; viral protein inhibitor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence represents a Herpes simplex virus type-2 (HSV-2) protein sequence represents a Herpes simplex virus type-2 (HSV-2) protein sequence of the invention. This sequence was isolated from a HSV-2 strain SB5 (deposited as ATCC VR-2546) DNA fragment designated Contig ID 12. The proteins can be used for the treatment or prevention of disease, to induce an immunological response in a mammal or to identify inhibitors, activators or novel antivirals. Antagonists of the proteins can be used to induce an iso be used to induce an immunological response in a mammal sequence or a vector containing it can also be used to induce an immunological response in a mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 10; Page 100; 748pp; English.
This sequence represents a Herpes simplex virus type-2 (HSV-2) protein sequence of the invention. This sequence was isolated from a HSV-2 strain SB5 (deposited as ATCC VR-2546) DNA fragment designated Contig ID 3. Based on homology, this sequence is a virion protein US10.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;

The proteins can be used for the treatment or prevention of disease, to induce an immunological response in a mammal or to identify inhibitors, activators or novel antivirals. Antagonists of the proteins can be used to inhibit a viral polypeptide. The DNA sequence or a vector containing it can also be used to induce an immunological response in a mammal. Sequence 302 AA;

Protein encoded by human UCP3sh gene reading frame 3.
Uncoupling protein 3. UCP3: thermogenesis: mammal; enhancer; drug;
Drotein catabolism: anti-obesity; inhibitor; muscle wasting; infection;
HIV; cancer; tumour cachexia; muscle disease; muscular dystrophy;
non-insulin dependent diabetes mellitus; diagnosis; human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A preparation is described in the specification for the production of a tate2 fusion protein. The sequence given is the same length as the disclosed compound but it is not actually claimed as such. The fusion construct consisted of the first 62 amino acids of the tat protein from HIVI, a linker serine residue and the the last 249 amino acids of BPVI E2 protein. The fusion protein gained entry to cells via binding of the tat molecule with the cell surface and the nonspecific endocytosis. The E2 molecule acts as a repressor once
                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /note= "the encoding reading frame has internal stop codons which are not indicated in this protein"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 셤
                                                                                                                                                                                                     New isolated uncoupling protein, UCP-3 - used to develop products

Tor modulating thermogenesis in tissues, e.g. for treating obesity

or muscle wasting caused by infection or cancer

Disclosure; Fig 2A-B; 98pp; English.

Sequences W81592 to W81594 represent protein fragments encoded by the tree reading frames of the human uncoupling protein 3 short form

(UCP3sh) gene. The invention provides human and mouse UCP3 genes (V7/110 and V7/712) encoding UCP3 proteins (W81597 and W81595) respectively. A cost cell transformed with a construct comprising the UCP3 uncleic acid can be used for the recombinant production of the protein. The UCP3 is involved in the regulation of thermogenesis in mammals. The nucleic acids (V7/710 to V7/712) can be used for identifying compounds which alter UCP3 activity. Enhancers of UCP3 can be used for enhancing protein catabolism in a mammal and can be used as anti-obesity drugs. Inhibitors of UCP3 can be used for inhibiting protein catabolism in a mammal such as inhibiting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   N-PSDB; V71110.

While year of the control of the control of cells biological actived transport fusion proteins - used to deliver

PT HV tat derived transport fusion proteins - used to deliver

PT biological active molecules e.g. peptide(s) or nucleic acids,

PT specifically into cytoplasm or nuclei of cells

Disclosure; Column 105-106; 83pp; English.

CC this specification describes a method for the delivery of biologically

CC crity cargo molecules into the cytoplasm and nuclei of cells, for

therapeutic, prophylactic or diagnostic purposes. This is accomplished

by the presence of a small, basic section of the human immunodeficiency

ctherapeutic, prophylactic or diagnostic purposes. This is used as it is this

CC therapeutic, prophylactic or diagnostic purposes. This is used to take up HIV.

CC transport molety usually in the form of a fusion protein. The cargo

CM the method involves the use of a cargo moiety in combination with a

CC transport molety usually in the form of a fusion protein. The cargo

CM of pubmide a pumman papillomavirus E2 repressor that retains its biological

CC (c) 38-72, (d) as 38-62. The protein fragments (a) as 47-52,

CC (g) as 47-62 or as 38-62. The proteins allow delivery of specific

CC (g) as 47-62 or as 38-62. The proteins allow delivery of specific

CC (g) as 47-62 or as 38-62. The proteins allow delivery of specific

CC (e) as A7-62 or as an additionally damage cells as they cause physical opening

CC (c) transporters. Previous methods of delivery include bombardment and

CC (c) infected and can additionally damage cells as they cause physical opening
for the recombinant production of the protein. The UCP3 is involved in the regulation of thermogenesis in mammals. The nucleic acids (V71710 to V71712) can be used for identifying compounds which alter UCP3 activity. Enhancers of UCP3 can be used for enhancing protein catabolism in a mammal and can be used for enhancing protein catabolism in a mammal and can be used for curtailing muscle wasting of UCP3 can be used for curtailing muscle wasting due to infection (e.g. HIV), cancer, tumour cachexia, muscle wasting due to muscular dystrophy) or as a possible treatment for non-insulin dependent diabetes mellitus. The products can also be used for detection and

New DINA constructs for transporting molecules to cells - encode a fusion protein comprising a modified HIV tat protein and a carboxy-terminal cargo molety
This sequence comprises a protein provided in the specification of US5652122. The invention relates to novel DNA molecules that encode fusion proteins (see W26436-42) between a modified HIV tat protein is modified by deletion of the Cys-rich domain and the exon 2-encoded C-terminal region. It is used to deliver the convently attached cargo molecule to a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              h 18.4%;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     intracellular delivery of viral repressor proteins
Disclosure; Column 103-104; 77pp; English.
This peptide is used to devise a novel method for delivery of biologically active cargo molecules into the cytoplasm and nuclei of eukaryotic cells. The tat protein from immunodeficiency virus (e.g. HIV-1, HIV-2, SIV) is readily taken up into cells when present extracellularly and can be modified to covalently link to cargo proteins e.g. E2 repressor proteins producing a fusion protein without the problems of spurious trans-activation and disulphide aggregation. These transport polypeptides also minimise interference with the biological activity of the cargo molecule. This is applicable for therapeutic, prophlactic or diagnostic intracellular delivery of small molecules and

HIV-TAT protein transport moiety peptide 11.
Human Immunodeficiency Virus; HIV Type 1; Tat protein;
cargo molecule; intracellular delivery; fusion protein;
therapeutic; prophylactic; diagnostic; transport polypeptide;
E2 repressor protein.

reating and preventing cancer of the cervix
Disclosure: Fig 10; 11pp: French.
The present sequence represents EZTR, a truncated Bovine papillomavirus
The present sequence represents EZTR, a truncated Bovine papillomavirus
The present sequence represents EZTR protein does not contain the
N'terminal transactivation domain. Compounds derived from EZ are able
to induce apoptosis in cells that have integrated part of the human
Papillomavirus (HPV) genome. The EZ protein and its derivatives, the
vectors (including those expressing wild-type EZ) and the corresponding
proteins or truncated EZ (EZTR) are all useful for treating or preventing
papillomavirus infection, particularly papillomavirus-associated cancers
(especially of the cervix uteri). The proteins, and sequences expressing
them, also induce apoptosis of virus-infected cells and increasing the
sequence 295 AA;
                                                                               'n
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ä

This represents a Bacillus agaradherens endoglucanase enzyme. This is

This represents a Bacillus agaradherens endoglucanase enzyme. This is

CC used in the construction of enzyme hybrids for liquefaction of starch.

The enzyme hybrids contain amino acid sequences of alpha-amylase linked

CC to a cellulose binding domain (CBD)..The starch.is liquefied.by treating, in aqueous medium, with such an enzyme hybrid. A recombinant expression vector comprising a construct containing isolated DNA encoding enzyme

CC to transform host cells for the production of the recombinant enzyme hybrids. The enzyme hybrids are useful in industrial starch processing especially for the production of sweeteners. Hybrid enzymes have altered affinity for substrate and increased activity, resulting in at least 1 of reduced calcium ion dependence, reduced formation of Maillard reaction

C saccharification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cleaning of cellulosic fabrics - using an enzyme hybrid comprising sequence of a non-cellulolytic enzyme linked to a cellulose-binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Liquefaction of starch for, e.g. production of sweeteners -comprises use of enzyme hybrids including cellulose binding domain
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Von Der Osten C;

This protein comprises the alkaline cellulase (endoglucanase) of Bacillus agaradherens NCIMB 40482. It was expressed in Bacillus subtilis PL2306 transformants following PCR amplification (see T74288-89) of B. agaradherens genomic DNA and ligation of the PCR product into vector pDNI981. DNA encoding the cellulose binding domain (CBD) of the alkaline cellulase was subsequently amplified
                                                                                                                                Bacillus agaradherens endóglucanase enzyme.

pir60 1:pir1 2:pir2 3:pir3 4:pir4 Database:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 35.867; Variance 69.695; scale 0.515
